TITLE: Methods of making

polarization rotators and articles

containing the polarization

rotators

----- KWIC -----

Detail Description Paragraph - DETX (26):
[0052] As yet another example, a polarization rotator element can be a formed using a liquid crystal material whose director rotates along the thickness axis of the polarization rotator element by a twist angle, PHI., which is much smaller than a phase retardation, .GAMMA., of the polarization rotator element. The phase retardation is given by:

Claims Text - CLTX (12):

11. The method of claim 10, wherein forming an aligned liquid crystal layer comprises forming the aligned liquid crystal layer with a twist angle that is substantially small than a phase retardation of the aligned liquid crystal layer.

Claims Text - CLTX (14):

13. The method of claim 12, wherein forming an aligned liquid crystal layer

comprises forming the aligned liquid crystal layer with a twist angle that is substantially small than a phase retardation of the aligned liquid crystal layer.
